

### **1992 Chevrolet S-10 Pick Up**

John Redmon of Eustis, Florida can vouch for the added benefits of superior synthetic lubricants. He feels that his truck's long service life can be attributed to using **AMSOIL** products since he bought it.

Redmon bought his 1992 Chevrolet S-10 in 1994. At the time, the odometer read 40,000 miles. "The day I bought it," Redmon says, "I took it in and had the oil changed to 10W-30 **AMSOIL**, but only after I had the engine flushed with **AMSOIL** engine flush."

Redmon is a courier by trade, and his truck is his service vehicle. His business demands a lot of driving and his truck is used in all types of traffic.

As of February 2001, Redmon's engine and truck have over 320,000 miles on them. "Even my mechanic and insurance company are surprised that the engine has not been rebuilt once since I have been the owner," Redmon said. Redmon's mechanic said that he sees no reason to rebuild the engine any time in the near future either.

"Even with this mileage I still feel safe enough to take this truck on a coast to coast trip without worry," said Redmon. "I thought you might want to know that I attribute the longevity of this truck to your products."
